Professional summary

Software engineer with a strong frontend background and experience building complete products. I have worked with React throughout my career, from customer-support and collections tools to patient websites, e-commerce and emergency-response software. I also contribute to backend features, integrations, payments and product architecture. I learn quickly, understand how systems work and take responsibility for turning a real workflow into software that people can use.

Professional experience

Senior Frontend Developer | Tala | 2023 - Present

- Build internal customer-support and collections tools for a lending business, including workflows for overdue repayments and partner-serviced borrowers.
- Built the frontend and interaction flow for loan-data correction requests, replacing spreadsheet handoffs with an in-application request, review and audit flow.
- Built login and role controls for partner-facing work, integrated customer profiles and loan details, and helped migrate React screens to Next.js with server-side rendering. I also contribute API and authentication changes.
- Built shared React component structure and a common theme for the support and partner-facing applications, implementing Figma designs with reusable props and patterns as adoption grew.

Founder | AOHYS | 2015 - Present

- Build products around real operational work, covering frontend, backend, data models, permissions, payments, notifications and integrations. Recent work uses React, TypeScript, Convex, Node.js and Cloudflare services.
- Use coding agents as implementation tools while I define the problem, architecture and constraints, review the result and remain responsible for how the pieces fit together.

Senior Frontend Developer | Drift | 2022 - 2023

- Worked on a dashboard for B2B website engagement, building charts and interfaces for visits, clicks, leads and visitor information when available.
- Migrated a Chrome video-recording extension from Manifest V2 to V3, adapting a sales tool to Chrome's changing extension platform.

Software Engineer | Prenuvo | 2021 - 2022

- Built the marketing website and worked on the patient-results website and supporting APIs for a whole-body MRI service.
- Connected React interfaces to information from other systems through Python and Flask. Docker was part of the development and deployment workflow for the connected applications.

Engineer Associate System IT-Development | Datazone / AutoZone | 2020 - 2021

- Worked on the vehicle selector that helped customers find parts compatible with the vehicle they chose, across the web experience and a React Native implementation.
- Helped migrate the web application from React to Next.js.

Application Development Senior Analyst | Accenture | 2018 - 2020

- Connected an undocumented dispatch keyboard to a React rapid-response system by working out its key combinations and mapping them to Redux Saga actions for emergency-resource requests.
- Built parts of a Node.js and React reporting application that retrieved data from client APIs, formatted large Excel reports and let users select a report and date range. Also contributed briefly to an Angular application for theme-park operations.

Senior Software Engineer | NEORIS / CEMEX | 2018

- Worked on the dispatch and delivery interface for requesting cement trucks, entering delivery addresses and following truck progress, with contributions across the existing application and bug fixes.

Selected projects

The Barber Central

Appointment booking and business operations for beauty businesses, connecting service browsing, staff availability, customer history and walk-in queues.

- I built booking, rescheduling and cancellation through WhatsApp Cloud API, with Mercado Pago checkout, Stripe business subscriptions and Resend email.

NutriPlan

Appointments, personalized nutrition plans, exercise scheduling, progress tracking and a patient portal with food-substitution requests.

- I work across React and Convex, including care-team access, organization roles and patient invitations. NOM-004 and NOM-024 are design references for clinical records and electronic health information.

ETERIA

Event-business operations covering leads, proposal versions, pricing, inventory and event closeout.

- I built the operational flows and work on the web product, shared Convex backend, native Swift/SwiftUI iPhone client and Cloudflare media pipeline.

Casa Roca

A hospitality website with content-management and reservation workflows for staff.

- I built tools to update public information, create reservations and handle check-in and check-out, with backend checks for overlapping bookings.

AOHYS website

A bilingual website and custom CMS presenting my products, work and approach.

- I built project publishing and media workflows with Convex and Cloudflare image delivery, plus canonical URLs, language alternatives, sitemaps and structured data.

Technical capabilities

Frontend: React, TypeScript, Next.js, JavaScript, Redux Saga, Angular

Backend: Node.js, Python, Flask, Java, Kotlin, Convex, REST APIs, MariaDB

Product delivery: Full stack development, server-side rendering, authentication, role-based access, Docker, CI/CD

Integrations: Stripe, Mercado Pago, WhatsApp Cloud API, Resend, Cloudflare

Mobile and desktop: Swift, SwiftUI, React Native, Electron

Education

Bachelor of Engineering, Software Development | UNAD - Open and Distance University of Mexico | 2014 - 2018

Bachelor of Business Administration, Maritime Trade | ITBOCA - Technological Institute of Boca del Rio | 2004 - 2008

Languages

English - Fluent, Spanish - Native
